A close-up photograph of brown leather with visible stitching. The leather has a textured, slightly wrinkled appearance. The stitching is a dark brown color and runs across the frame in several places, creating a grid-like pattern. The lighting is warm and directional, coming from the upper right, which creates highlights and shadows that emphasize the texture of the leather.

FEATURES

ASTM F2413
The official standard for safety toe protective footwear in the United States.

COMPOSITE TOE
A non-metallic rigid polymer protective toe cap, which is light weight and will not conduct heat, cold or electricity. Meets or exceeds the ASTM F2413 standard for protective footwear.

XTR® BRAND COMPOSITE TOE CAP
Provides extra toe room and comfort; is lightweight, strong as steel and will not conduct heat, cold or electricity. The XTR® Brand composite toe cap meets or exceeds the ASTM F2413 standard for protective footwear.

STEEL TOE
Non-corrosive protective toe cap. Meets or exceeds the ASTM F2413 standard for protective footwear.

STATIC DISSIPATIVE SD 10 WITH DUAL RESISTOR
Static Dissipative footwear dissipates static electricity from the wearer's body into the walking surface to prevent static electricity build-up. It also provides some electrical resistance and offers limited protection to the wearer against electrical shock. Dual Resistor SD is a Warson Brands patented technology (US Patent 6,421,222) that precisely and reliably provides 1 to 10 megohms of electrical resistance, ensuring that the footwear meets the SD 10 standard. These shoes are to be used in areas where the generation of static electricity could harm electrical equipment, circuit board assembly, the manufacture of computer chips, or paint application processes.

STATIC DISSIPATIVE SD 35
ESD Footwear is designed to dissipate static electricity from the wearer's body into the walking surface to prevent static electricity build up. These shoes meet or exceed the ASTM F2413 SD35 standard and provide an electrical resistance of 1 to 35 megohms (3.5×10^7 ohms). These shoes are to be used in areas where the generation of static electricity could harm electrical equipment, circuit board assembly, the manufacture of computer chips or paint application processes.

ELECTRICAL HAZARD
EH footwear provides a source of protection to the wearer from electrical shock in environments where the wearer may accidentally step on a live wire or charged electrical equipment.

FLEX-MET®
An anatomically shaped flexible metatarsal guard with shock cushion permanently inserted inside the instep area of the shoe upper.

METatarsal GUARD
A reinforced layer in the metatarsal portion of the footwear that protects the metatarsal bones by deflecting falling objects and absorbing impact energy. Traditionally used in areas where there is a higher risk of objects falling or rolling onto the metatarsal area of the worker's foot. Meets or exceeds the ASTM F2413 standard for metatarsal protective footwear.

SLIP RESISTANT
Soles designed to provide a high coefficient of friction with the walking surface to improve slip resistance.

HYDRO-SHIELD® WATERPROOF
Rockport Works Hydro-Shield® is a waterproof, breathable technology that protects your feet from harsh weather without sacrificing comfort. In addition to waterproof leather it consists of seam sealing and a waterproof insole board to help prevent the penetration of water. For industrial applications, Hydro-Shield™ protection is guaranteed as Water Resistant protection.

METAL FREE
Footwear that contains zero metal. 100% metal free. It is ideal for jobs that require working around sensitive metal detectors.

CSA IMPACT
The blue rectangle indicates a Grade 1 protective toecap with no puncture-resistant sole and is for industrial work environments not requiring puncture protection. Rockport Works footwear is manufactured to meet or exceed CSA Z195 Grade 1 protective toe without puncture protection.

CSA ELECTRO-STATIC DISSIPATIVE
The yellow rectangle with a black SD letters indicates static dissipative footwear that is for industrial work environments where a static discharge can create a hazard for workers or equipment. Rockport Works footwear is manufactured to meet or exceed CSA Z195 Grade 1 protective toe for static dissipation. WARNING: This footwear should not be used where contact with live electrical conductors can occur.

CSA ELECTRICAL SHOCK RESISTANCE
The white rectangle with orange Greek letter omega indicates electric-shock protective footwear that is for industrial work environments where accidental contact with live electrical conductors can occur. Rockport Works footwear is manufactured to meet or exceed CSA Z195 Grade 1 protective toe for electric-shock protection. WARNING: Electrical shock resistance deteriorates with wear and in wet environments.

ABOUT US

Warson Brands* offers a portfolio of six national brands and over 200 styles of safety footwear for men and women. We have been in the occupational footwear manufacturing business since 1988. We design and engineer footwear for nearly every occupation on the planet. With us, designing and crafting occupational and duty uniform footwear isn't just a sideline, it's our passion, our one and only business.

OUR MISSION: PERFORMANCE

Our business model is simple: the better our shoes perform, the better our customers perform – from our wholesale and retail customers to our end-users.

OUR GOAL:

Providing the best customer service, period. We sell occupational footwear all over the world. However, when it comes to customer service, we want to be right next door. Our customer service staff, with a combined experience of over 300 years, knows your business and works hard to earn it every day.

Meet the Rockport Works **Sailing Club RK6734** featuring Poron® XRD®—an internal met guard material that's soft to the touch, yet tough on impact.

It's different.

Here's how it works:

A lightweight, thin and breathable met guard material that's engineered for repeated impact and shock absorption. Soft, flexible and comfortable during normal wear, it instantly firms to form a protective shell that shields the instep from impact (Like water instantly freezing into ice.) It instantly dissipates force, absorbing up to 90% of energy.
